

UBC study looking to interview people who have participated in a prescription drug clinical trial

Results of clinical trials are often not published, and researchers would like to hear what trial participants think

Clinical trials are an important part of developing new drugs and providing the best medical care. However, about 4 in every 10 clinical trials are either not published or only published after a long delay. When clinical trials are not published, it is less likely these trials will add to science or improve patient care.

Research participants wanted: past clinical trial participants

We are interested to learn more about the experiences and views of people who have participated in a prescription drug clinical trial, especially to find out their views about the importance of publishing the results of trial research.

You are invited to participate in this study if:

- You participated in a clinical trial of a prescription drug in Canada within the past 5 years and your participation has now ended.
- You were 18 years or older when you participated in the trial.

Participation will involve an interview of about 60 minutes (at a time and place of the participant's convenience). Interviews will usually be held in person for participants in Victoria or Vancouver and by phone for participants in other parts of BC or Canada. Some participants may be asked to do a 15-minute follow-up telephone interview, but this will not be required. Participants will receive a \$50 honorarium for their time if they wish to receive it.

The Principal Investigator of the study is Colin Dormuth, Associate Professor, Anesthesiology, Pharmacology & Therapeutics, University of British Columbia.

To volunteer or find out more

To participate or find out more, contact PhD Candidate Richard Morrow at rlmorrow@mail.ubc.ca or by calling or texting 250-886-6394 or visit www.insidetrialsstudy.ca.
